

# Intelligent Platform for Crowdsourcing (IPCrowd)

VIP Team Advisors: Carl Cox (GTRI), Tiffany Huang (GTRI), Alexandra Trani, Ph.D. (GTRI)

## Goals

To study and develop new approaches with cognitive reasoning modules, advanced data analysis and knowledge visualization to enhance the experience and truthfulness of crowdsourced problem-solving

## Research Questions

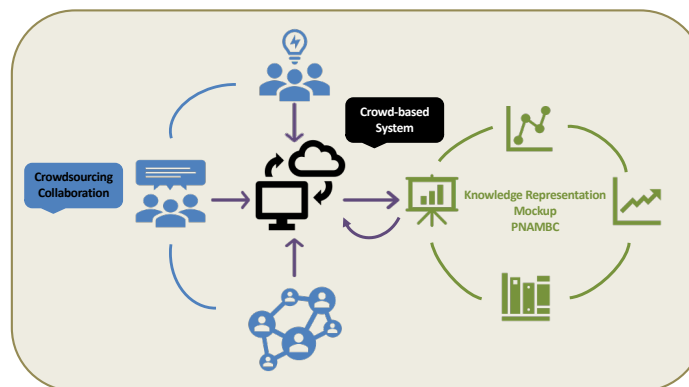

- Design of collaboration techniques
- Provision of domain specific intelligent support modules for crowd participants
- Reliability and trustworthiness of crowdsourced data
- Data analysis and visualization for multiple kinds of data with scaling
- Design of human interaction for a crowd-based system
- Appropriate decision support and information access for crowd participants

## Methods and Technologies

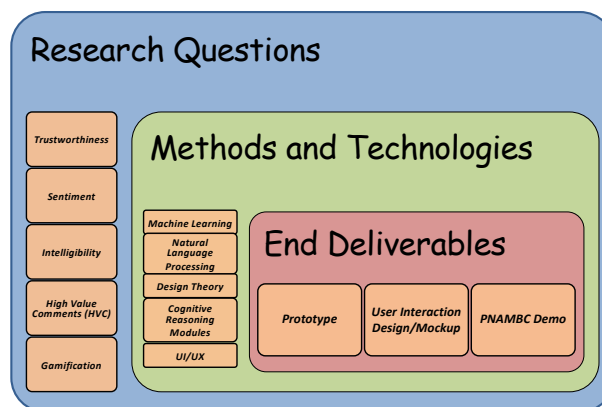

- Crowdsourcing
- Knowledge representation and reasoning
- Cognitive systems
- Data visualization
- Hypothesis generation and evaluation
- Collaboration technologies
- User interaction design and design theory
- Machine learning and natural language processing

## End Deliverables

Pay No Attention to the Man Behind the Curtain (PNAMBC) Demo

## IPCrowd Interaction

## IPCrowd Overview

## Majors

- Computer Science
- Computer Engineering
- Electrical and Computer Engineering
- Industrial and Systems Engineering
- Psychology
- Management (MGMT)
- Public Policy
- Digital Media

## Experiences/Interests

- Human interaction, knowledge representation, collaboration techniques, crowdsourcing data
- Systems, user interaction design, modeling and simulation, problem solving, data analysis and visualization
- Machine learning and natural language processing
- Project planning, business plan, marketing, product focus group (MGMT)
- Policy deliberation, public policy-based problem definition (Public Policy)
- Hypothesis generation and evaluation, collaboration technologies, cognitive systems (Psychology)
