

UX FUNDAMENTALS

with a Software Development Focus

OVERVIEW

- Introduction
- What is UX/UI/Usability?
- Why UX?
- Design Thinking
- Software Focus
- Questions/Discussions
- Resources

INTRODUCTION

// David Tran

- Education: CS and MS HCI
- Experience: Web development and some mobile development
- Your name and major ?

WHAT IS UX?

“User experience” encompasses all aspects of the end-user’s interaction with the company, its services, and its products. (or total user experience)

Don Norman and Jakob Nielsen

YOU != USER

UX VS. USABILITY

UX vs. usability: Usability is a quality attribute of the UI, covering whether the system is easy to learn, efficient to use, pleasant, and so forth.

WHY UX?

fahmiツ
@fahmitsu

Why UX research is
important

- Positive user experience and impact
- Help save lives
- Competitive advantage, brand/product loyalty

OBSTACLES

- Some cognitive biases
 - UX is unaffordable
 - We've satisfied management's requirements
 - Usability problems are best solved through support

Gartner report: Cognitive Biases That Keep UX Design Out of the Enterprise (2016)

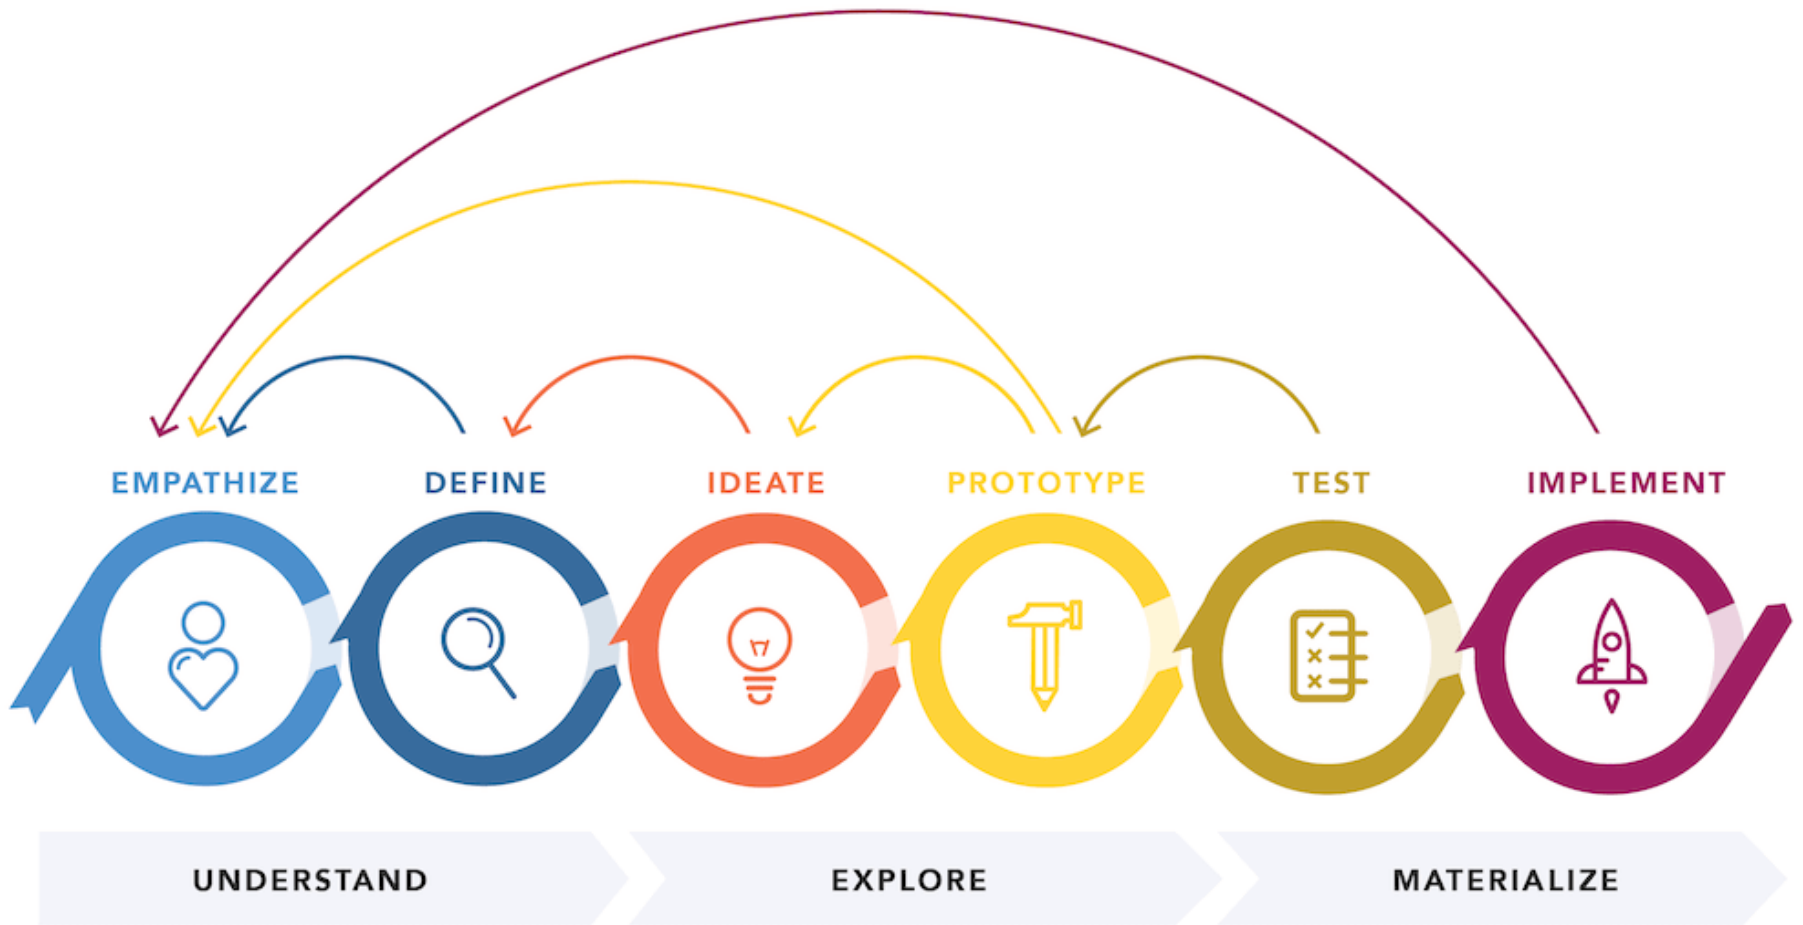

KEY FINDINGS

- Too many organizations look for excuses for not implementing any form of a user experience (UX) design process. However, these excuses are most likely a result of limited understanding or operating experience of the UX design process in action.

- The end result is a perpetuation of the status quo within the IT organization — an untenable situation because the problems caused by the absence of UX design continue to mount.

DESIGN THINKING: FLEXIBLE PROCESS

The design thinking ideology asserts that a hands-on, user-centric approach to problem solving can lead to innovation, and innovation can lead to differentiation and a competitive advantage.

TOOLBOX

A LANDSCAPE OF USER RESEARCH METHODS

BEHAVIORAL

● / ■ Eyetracking

● Clickstream Analysis

● A/B Testing

■ Usability Benchmarking (in lab)

■ Usability Lab Studies

■ Moderated Remote Usability Studies

● Ethnographic Field Studies

■ Unmoderated Remote Panel Studies

■ Unmoderated UX Studies

● True Intent Studies

◆ ← Concept Testing →

● Diary/Camera Studies

● Customer Feedback

◆ Participatory Design

▲ Focus Groups

◆ ← Desirability Studies →

● Intercept Surveys

▲ Interviews

▲ ← Card Sorting →

▲ Email Surveys

ATTITUDINAL

QUALITATIVE (DIRECT)

QUANTITATIVE (INDIRECT)

KEY FOR CONTEXT OF PRODUCT USE DURING DATA COLLECTION

● Natural use of product

▲ De-contextualized / not using product

Each dimension provides a way to distinguish among studies in terms of the questions they answer and the purposes they are most suited for.

SOFTWARE FOCUS

- User Research (how much to do, use existing products, use SMEs)
- Design System (evalate existing ones)
 - A design system is a complete set of standards intended to manage design at scale using reusable components and patterns.
- Architectural decisions (tech stack)
 - Design System
 - Frontend and backend frameworks, databases
