

Intelligent Platform for Crowdsourcing (IP Crowd)

Vertically Integrated Projects at Georgia Tech (Spring 2024)

Introduction

What is VIP?

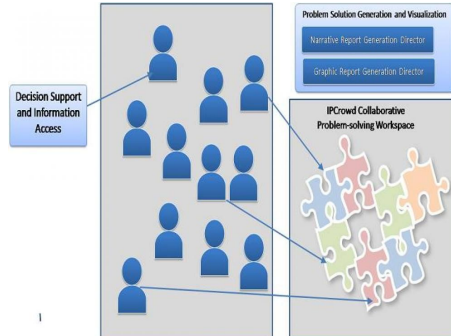

- Long term multidisciplinary project teams
- Opportunity to learn professional skills and make contributions to real world projects
- Fosters an environment of leadership & mentorship between students and faculty

What is IP Crowd?

- Enhancing the experience and usefulness of crowdsourced problem-solving
- Empowering AI through crowdsourcing & open-source initiatives

What is PNAMBIC?

- Pay No Attention to the Man Behind the Curtain
- Work in progress implementations that require HCI to mimic the complexity of the systems

MC: Vanshika Varadh

Terms & Conditions - Summarizing

Team Members: Bryan, Amith, Max, Eric

Terms & Conditions - Summarizing

Why does this work matter?

By offering a way to summarize and condense the terms and conditions, we give users the power to:

- Be in the know with what they are signing up for.
- Understand terms in a easy and quick manner.
- Have flexibility in topics that are prioritized.

What did we try to do?

- Create an application that summarizes the terms and conditions in a way that makes it easier for users to understand.
- Utilize AI to give more specific explanations of each summarized topic.
- Give users a quiz to assess what parts of the terms and conditions the user want to learn about.

What did we actually accomplish?

- Created an application that takes in a link and choice of topic.
- Generates a summary of the terms and conditions organized by sections based on the chosen topic.
- User can pick one of the sections and ask questions about it for a more in depth explanation.

Terms & Conditions - Summarizing

Implementation

- We utilized Google Gemini for summarization for its availability and ability to modify text requests
- We used a brief quiz prior to summarization to allow for the user to customize their experience based on their interests, and to bring in a further level of AI usage, rather than having a hardcoded summarization

Terms & Conditions - Summarizing

B. Account Terms

The Account Terms section outlines the requirements to create and maintain an account on GitHub. It states that a human must create your account, you must be at least 13 years old to create an account, and you must provide a valid email address. Each human or legal entity is limited to one free account, which is responsible for all activities that occur under it. This section also emphasizes the user's responsibility for keeping their account secure and informs users about account security measures like two-factor authentication.

Users should not violate the Acceptable Use Policies outlined in section C of the GitHub Terms of Service. These policies include ensuring that your use of the Service complies with all applicable laws, including copyright, trademark, and export control laws. Users must also adhere to GitHub's Acceptable Use Policies and Community Guidelines, which outline rules for conduct on the platform to promote a positive and respectful online community. In summary, users should not engage in any behavior that violates laws, infringes on the rights of others, or goes against the acceptable use policies and guidelines set forth by GitHub. Failure to comply with these policies may result in account suspension or termination.

Put link to terms and conditions here:

Select the topic(s) most relevant to you.

☐ General Summary ☐ Intellectual Property ☒ Consumer Protections ☐ Age Restrictions

B. Account Terms

This section establishes the basis for creating and managing an account on GitHub, emphasizing the responsibility of account holders for their accounts and content. Users are reminded of the necessity of being human, the requirement of a valid email address, the prohibition on account sharing, and the importance of adhering to applicable laws regarding export control and sanctions.

C. Acceptable Use

Users must follow guidelines that promote respectful and lawful use of GitHub services, ensuring their actions do not violate any laws or GitHub's policies. This promotes a collaborative and inclusive environment for all users.

D. User-Generated Content

While users retain ownership of the content they generate, they grant GitHub certain rights to enable service provision. GitHub emphasizes the responsibility of users for their content and the non-liability of GitHub for any misuse.

E. Private Repositories

GitHub values the confidentiality of content in private repositories, promising to safeguard it with a high degree of care. Access by GitHub personnel is limited and regulated, ensuring respect for user privacy within these repositories.

What GitHub policies should users not violate?

Clarify a section

Select a section to clarify:

Ask a clarification question.

Users should not violate the Acceptable Use Policies outlined in section C of the GitHub Terms of Service. These policies include ensuring that your use of the Service complies with all applicable laws, including copyright, trademark, and export control laws. Users must also adhere to GitHub's Acceptable Use Policies and Community Guidelines, which outline rules for conduct on the platform to promote a positive and respectful online community. In summary, users should not engage in any behavior that violates laws, infringes on the rights of others, or goes against the acceptable use policies and guidelines set forth by GitHub. Failure to comply with these policies may result in account suspension or termination.

F. Copyright Infringement and DMCA Policy

GitHub provides a clear procedure for addressing copyright infringement complaints via its DMCA policy. Repeat infringers face account termination, illustrating GitHub's commitment to protecting intellectual property rights.

H. API Terms

Use of GitHub's APIs is governed by specific rules to prevent abuse and to protect the integrity of the service. GitHub reserves the right to suspend or restrict access to its API for those who violate these terms or overburden the service infrastructure.

K. Payment

The section outlines the responsibilities of users regarding payment for GitHub services. It emphasizes the non-refundable nature of these payments and delineates billing practices for both subscription and usage-based services.

L. Cancellation and Termination

Users can cancel their accounts at any time, and GitHub also reserves the right to terminate accounts. This segment details the process for account cancellation and what happens to user data post-cancellation.

M. Communications with GitHub

GitHub communicates with users primarily through electronic means. Users agree to receive communications from GitHub digitally, which is crucial for maintaining an open channel for service-related notices and updates.

N. Disclaimer of Warranties

GitHub disclaims all warranties to the fullest extent permitted by law, providing its service 'as is' and making no guarantees regarding the reliability, safety, or performance of its service.

O. Limitation of Liability

This section limits GitHub's liability in connection with the use of its service, clarifying that GitHub will not be liable for indirect, special, or consequential damages arising out of the use of its service or content.

P. Release and Indemnification

Users agree to indemnify GitHub against any claims related to their use of the service. This includes holding GitHub harmless against liability and assisting in its defense if users' actions infringe on the rights of others or violate the law.

Q. Changes to These Terms

GitHub retains the right to modify these terms at any time but will provide notice of materially significant changes. This ensures users are always aware of the terms governing their use of the service.

Terms & Conditions - Summarizing

What Failed

- LLM can Hallucinate.
- Intricate ideas in original T&C may not be captured precisely.
- Response sometimes fails since LLM does not format response properly (JSON Array)

Future Directions

In the future, we hope to:

- Fine Tune the LLM to better summarize text in terms and conditions by using custom training data.
- Use more state-of-the-art models such as GPT-4 Turbo and Claude 3 Opus, etc.
- Include additional parameters for summarizing, such as:
 - Image-based summarizing vs Text based
 - Diagramming component

Terms & Conditions - Rephrasing

Team Members:

- Vanshika
- Xinxin
- Sylvia
- Shree

Terms & Conditions - Rephrasing

Why does this work matter?

Users often struggle with motivation and comprehension of highly technical Terms & Conditions which compromises their data, by implementing this tool we:

- Provide a convenient and efficient way to reword sections of T&C that are hard to comprehend
- Allow users to get a holistic understanding of their digital rights and data usage/privacy
- Restructuring T&C jargon to a specific user's level of comprehension

What did we try to do?

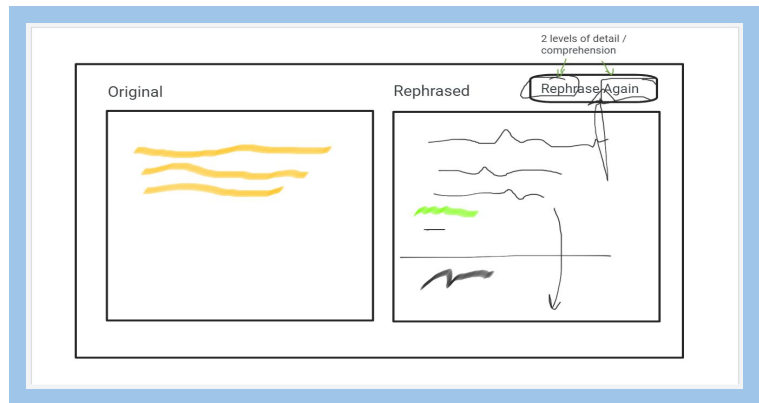

- Goal: To promote better and personalized understanding of Youtube Terms & Conditions
- Created an embedded webpage AI tool that rephrases a selected section of text

Terms & Conditions - Rephrasing

What did we actually accomplish?

- Defined how to prompt a GPT to generate a rephrasing for a particular user
 - Information to provide about the user
- Created a mockup of the tool

Initial planning in Jamboard

Terms & Conditions - Rephrasing

What techniques or methods did we use to solve the problem?

- Google's Gemini API
- Highlight selection ability specific text to rephrase
- Tool that works on top of existing Terms & Conditions

Why did you choose this approach?

- LLM rephrasing ability is versatile
- Giving control to the user
- Lightweight solution

Terms & Conditions - Rephrasing

Terms & Conditions - Rephrasing

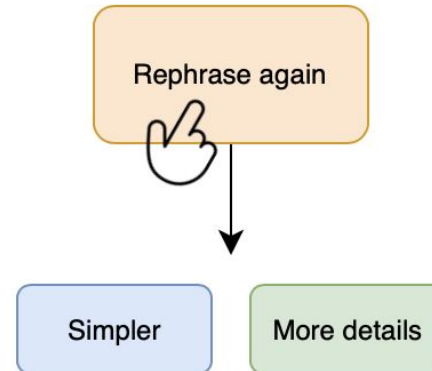

How can the feature can fail? Why?

- Lack of interest
 - Text might still be long/ user not understand importance
- Specific language for legal reasons
 - Some legal terms may not have a simple equivalent

Future Directions

- Different levels of detail - choice buttons
- Add an educational component that explains why certain terms and conditions are important
- Multilingual support

Terms & Conditions - Visualization

Team Members:

- Xinxin
- Vanshika
- Maria
- Rikitha

Terms & Conditions - Visualization

Why?

- Deliver information in visual format for people who have difficulty reading long or dense texts
- Reduce text more than rephrase / summarize
- Quickly find key information
- Easily create diagrams for other purposes

What did we try to do?

- Create AI tool to generate data flow diagrams from sections of Terms & Conditions (Privacy Policy)

What did we actually accomplish?

- Determined current AI tools that can generate data flow diagrams based on text
- Created solution that generates diagrams based on YouTube Terms & Conditions

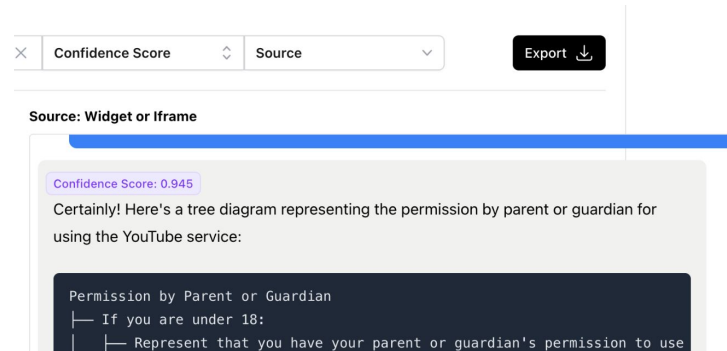

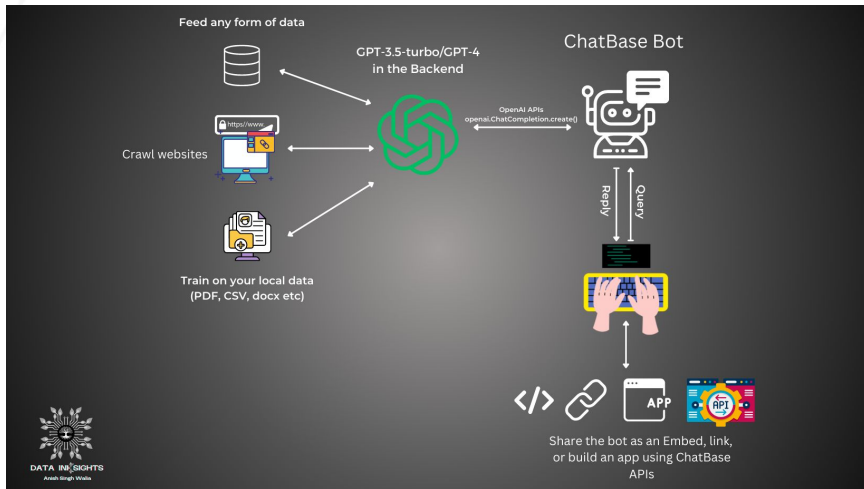

Terms & Conditions - Visualization

What techniques or methods did we use to solve the problem?

- OpenAI through Chatbase (3rd party access) with personalized training capabilities
- Trained the AI chatbot with Youtube Terms & Conditions knowledge base
- LLM Model: gpt-3.5-turbo

Why did you choose this approach?

- High Reliability and Accuracy - customizable visuals, controlled learning & response scope
- Confidence Score for each diagram/response generated

Terms & Conditions - Visualization

Solution Demo:

TERMS OF SERVICE

Welcome to YouTube!

Thank you for using the YouTube platform and the products, services and features we make available to you as part of the platform (collectively, the “Service”).

Our Service

The Service allows you to discover, watch and share videos and other content, provides a forum for people to connect, inform, and inspire others across the globe, and provides a platform for advertisers large and small. We provide lots of information about our products and how to use them in our Help Center. Among other things, you can find out about our Memberships and Purchases (where available). You can also read all about enjoying content on other devices like your television, your games console, or Google

Your Service Provider

The entity providing the Service is Google LLC, a company operating under the laws of Delaware, located at 1600 Amphitheatre Parkway, Mountain View, CA 94041. For purposes of this Agreement, YouTube’s “Affiliates” in these terms means the other companies within the Alphabet Inc. corporate group (now or in the future).

Applicable Terms

Your use of the Service is subject to these terms, the YouTube Community Guidelines and the Policy, Safety and Copyright Policies which may be updated from time to time. We also include the Advertising on YouTube Policies if you provide advertising or sponsorships to the Service or incorporate paid promotions in your content. Any other terms and conditions that apply to you are also part of the Agreement.

Please read this Agreement carefully and make sure you understand it. If you do not understand the Agreement, or do not accept any part of it, then you may not use the Service.

Who may use the Service?

Age Requirements

You must be at least 13 years old to use the Service; however, children of all ages may use the Service and YouTube Kids (where available) if enabled by a parent or legal guardian.

Permission by Parent or Guardian

If you are under 18, you represent that you have your parent or guardian’s permission to use the Service. Please have them read this Agreement with you.

If you are a parent or legal guardian of a user under the age of 18, by allowing your child to use the Service, you are subject to the terms of this Agreement and agree to use the resources to help you manage your family’s experience on YouTube (including how to enable a child under the age of 13 to use the Service and YouTube Kids) in accordance with the applicable laws.

Businesses

If you are using the Service on behalf of a company or organisation, you represent that you have authority to act on behalf of that entity, and that such entity accepts this Agreement.

Certainly! Here's a tree diagram representing the permission by parent or guardian for using the YouTube service:

Permission by Parent or Guardian

- ├ If you are under 18:
 - ├ Represent that you have your parent or guardian's permission to use the Service.
 - ├ Please have them read this Agreement with you.
- ├ If you are a parent or legal guardian:
 - ├ By allowing your child to use the Service, you are subject to the terms of this Agreement.
 - ├ You are responsible for your child's use of the Service.
 - ├ You can find tools and resources to help you manage your family's experience on YouTube (including how to enable a child under the age of 13 to use the Service and YouTube Kids) in our Help Center.
 - ├ Google's Family Link

I hope this tree diagram helps illustrate the permission by parent or guardian for using the YouTube service. If you have any further questions or need assistance with anything else, feel free to ask!

TERMS OF SERVICE

Welcome to YouTube!

Thank you for using the YouTube platform and the products, services and features we make available to you as part of the platform (collectively, the "Service").

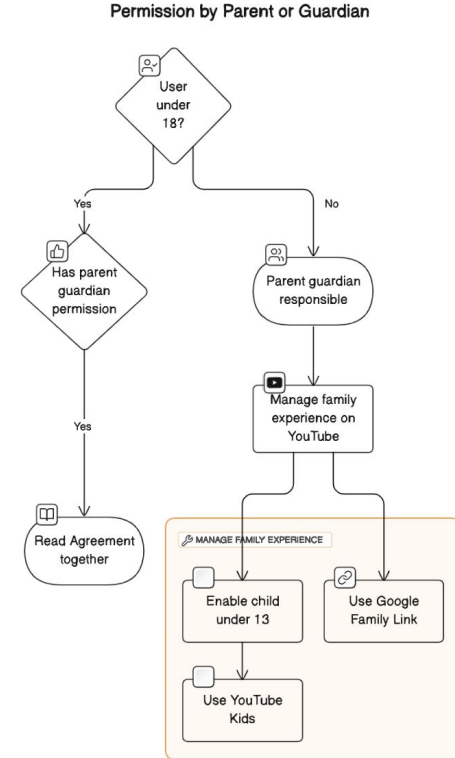

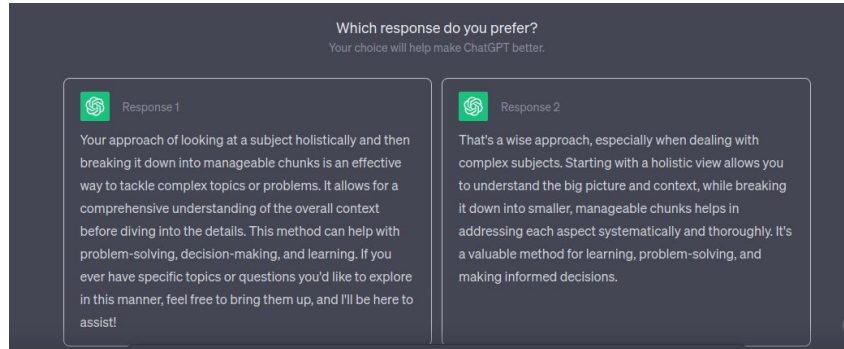

Our Service

The Service allows you to discover, watch and share videos and other content, provides a forum for people to connect

Terms & Conditions - Visualization

Future Directions

- Transition from a text-based diagram to a flowchart
- Have a feature that allows the user to choose which model they prefer based on options given by the AI

Socialization - AI Trust Enhancer

Team Members: Max Xu, Eric Zhang, Daniel Ling, Kun-Lin Hsieh

Socialization - AI Trust Enhancer

(1) What did we try to do? (2) What did we actually accomplish? (3) Why does this work matter?

- We aim to provide pseudonymity (partially anonymous through a pseudonym) platform users with accessible tools to comprehensively analyze their online presence for identity-revealing information.
- Developed a user-friendly tool, "Privacy Analyzer" enabling users to cross-analyze their Reddit posts/comments, empowering them with insights into potential identity exposure.
- This work matters as it grants users greater control over their data and shields them from malicious actors seeking identifying information.

Socialization - AI Trust Enhancer

Issues we ran into:

- LLM hallucinates data that was not present from posts
- Prompts does not consistently provide links to a user's posts
- Difficulty in providing users with customizability due to LLM dominance in decision-making.

Techniques/Methods Used:

- Leveraged the increasing capabilities of Large Language Models (Specifically Gemini) for deep semantic analysis to address the growing need for user-friendly privacy analysis tools.
- Prompt Engineering: Crafting effective prompts to guide LLMs in analyzing Reddit posts/comments.
- Data Filtering: Implementing robust filters to sift through vast amounts of data efficiently.

Socialization - AI Trust Enhancer

Solution Live Demo:

[Get User Data](#)

User Data

Your Reddit profile is quite diverse, covering a wide range of topics from personal finance, technology, and gaming to specific interests in Pokémon TCG, chess, and book collecting. Here's a summary of your activities and some areas that might reveal your identity:

General Interests:

- **Pokémon TCG:** You're actively involved in discussions about Pokémon trading cards, including trading, grading, and investing in them. You've also shown interest in specific Pokémon TCG products and market trends.
- **Chess:** You participate in chess-related discussions, including commenting on professional chess matches and players.
- **Book Collecting:** You have an interest in collecting rare books, with discussions around the value of specific editions and the condition of old books.
- **Technology and Programming:** You've discussed topics related to programming, web development tools, and technology products, indicating a background or interest in these areas.

Specific Posts and Comments:

- You've discussed using [privacy.com](#) for making a card, indicating concerns about online privacy and security ([source](#)).
- You've shown an interest in Pokémon TCG strategies and deck setups, indicating a deep engagement with the game ([source](#)).
- You've inquired about legal aspects of refusing to concede in a Pokémon TCG match, showing involvement in competitive play ([source](#)).
- You've discussed specific investments in Pokémon cards, indicating financial interests in collectibles ([source](#)).
- You've sought advice on ergonomic mouse options due to wrist discomfort, suggesting long periods spent using a computer ([source](#)).

Potential Identity-Revealing Information:

- Mention of using [privacy.com](#) and specific transactions could be linked back to your identity if someone cross-references it with leaked data or public transaction records.
- Detailed discussions about your Pokémon TCG trades, especially if linked with unique trades or sales, could be used to identify you on platforms where such transactions occurred.
- Your specific questions about book conditions and editions might reveal your collecting habits or ownership of rare items, potentially narrowing down your identity to those familiar with your collection.

Recommendations:

- Be cautious about sharing too much detail on financial transactions or investments, especially in niche markets like Pokémon TCG, where the community might be small enough for individuals to be identified based on their collections or trading patterns.
- Consider the amount of personal detail you share in technology and health-related posts, as these could also contribute to revealing your identity when combined with other information.

Overall, your profile shows a rich engagement with several communities, with a strong focus on hobbies and interests. To protect your identity, you might want to review and possibly edit or remove posts that contain highly specific information that could be linked back to you.

Socialization - AI Trust Enhancer

What Failed

- LLM produces inconsistent numerical privacy scores, and so we removed the feature
 - Different groups of posts yielded results that were not cross-comparable
- Higher cost if user has more data, thus not all user data can be included at this time.

Future Plans

- Cache user searches in database to avoid repeat token submissions
- Dynamic token adjustment based on user history
- Pay per use for user with more data so that they can fully search their history

Socialization - AI Buddy

Team Members:

- Sylvia
- Shree
- Jing
- Amith
- Suhas
- Erik

Socialization - AI Buddy

Why does this work matter?

- Provides context to aid in understanding discussions
- Saves time during live conversations through efficient info retrieval
- Accessibility

What did we try to do?

- AI-centric tool to facilitate user interactions
- Have access to conversation data, and provide relevant advice

What did we actually accomplish?

- Designed outline of a new custom LLM-powered chat agent application with high-level features
- Detailed use cases with multiple scenarios and concrete hypothetical response examples
- Laid architecture groundwork for actual implementation including interface design

Socialization - AI Buddy

Why did we choose this approach?

Having an Individual User AI Buddy allowed us to:

- Give additional information to the individual if they have confusion about a subtopic from the internet
- Provide a space for the individual to sort their thoughts out during the discussion

Issues We Ran Into

- Deciding between Group AI buddy vs User AI buddy for facilitating interactions.
- How would each option play out in our use case scenarios? Ex) SW Development Meetings, Book Club
- Add focus to group conflicts and user understanding.

Group AI

Pros: Collaborative Learning, Community Building, Efficiency

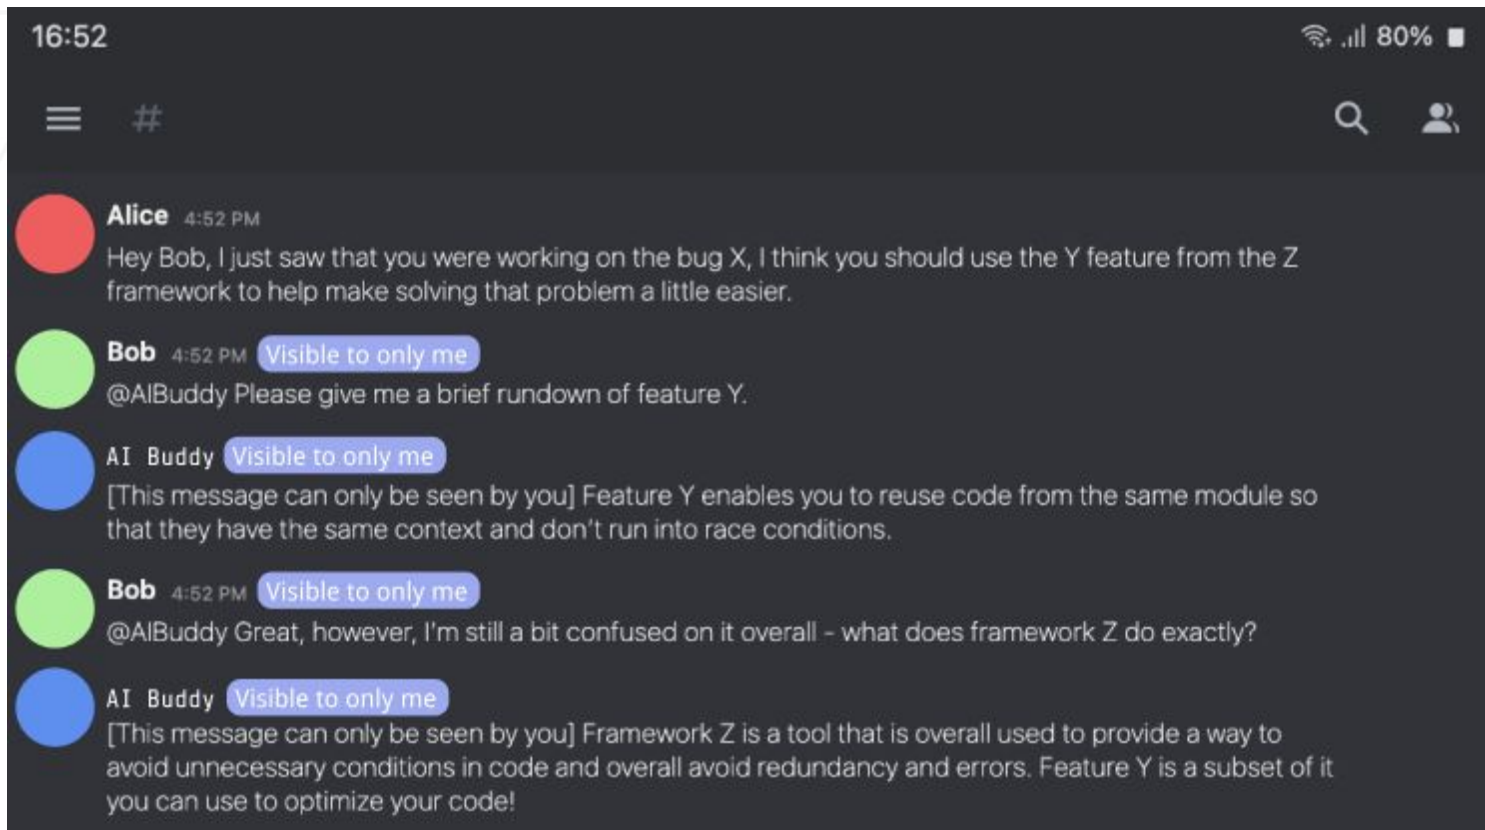

Cons: Noise, Confusion, Privacy Concerns

User AI

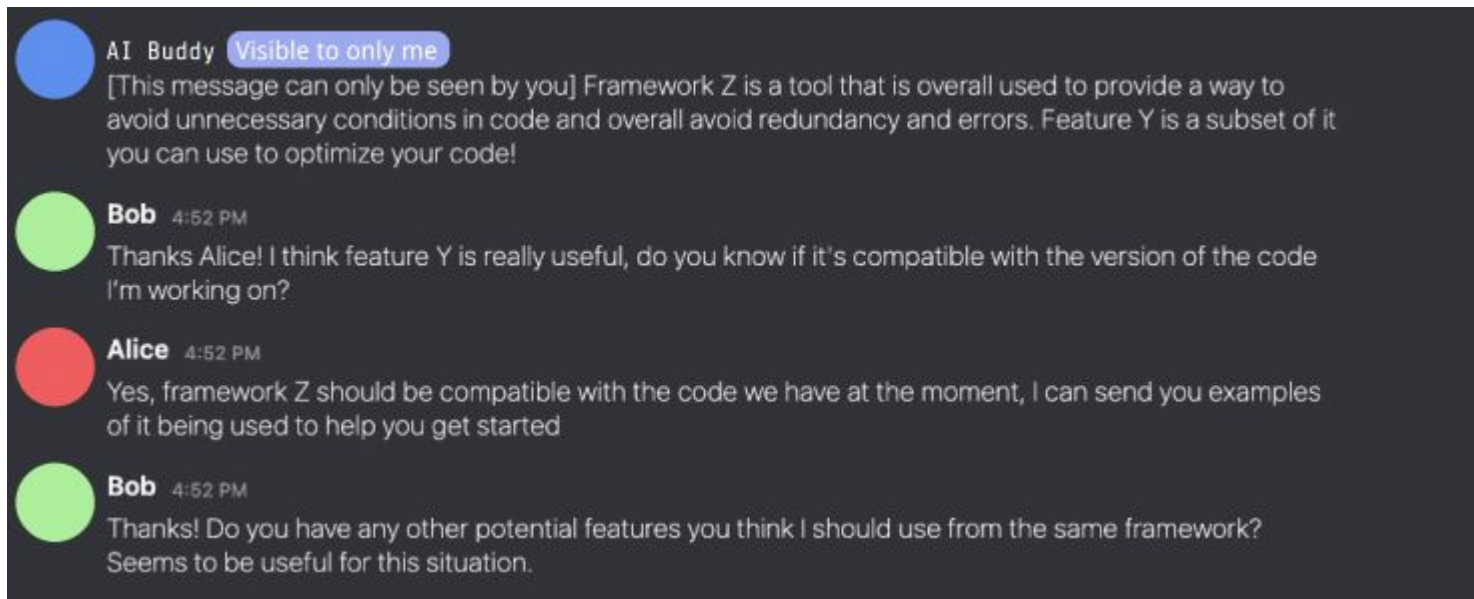

Pros: Personalized Learning, Focused Interaction, Privacy

Cons: Potential Isolation, Limited Knowledge Sharing, Resource Intensive

Socialization - AI Buddy

Socialization - AI Buddy

AI Buddy Visible to only me
[This message can only be seen by you] Framework Z is a tool that is overall used to provide a way to avoid unnecessary conditions in code and overall avoid redundancy and errors. Feature Y is a subset of it you can use to optimize your code!

Bob 4:52 PM
Thanks Alice! I think feature Y is really useful, do you know if it's compatible with the version of the code I'm working on?

Alice 4:52 PM
Yes, framework Z should be compatible with the code we have at the moment, I can send you examples of it being used to help you get started

Bob 4:52 PM
Thanks! Do you have any other potential features you think I should use from the same framework? Seems to be useful for this situation.

Socialization - AI Buddy

What failed? Why?

In the end, we were unable to actually build a prototype due to the scope of the project. Since we would have to build an entire AI and train it, the time frame was just not feasible.

- However, we were able to flesh out the details of how it would work in theory, something that is the perfect launching pad for building
- We were also unable to do both a group and individual AI buddy because it would both be expensive and lead to a lot of overhead, so focusing on and fleshing one out was the better overall decision.

Future Direction:

In the future, we hope to build the AI Buddy in a way where it can be used in real conversation and help bring people together. We hope that the AI Buddy can:

- Converse with the user and provide a way for individuals to get more information to lead to more productive discussion
- Specifically, we hope that in the future the AI buddy can be a simple tool to just give information to people (even if it is not something that is conversational, just provides data).

Socialization - Social Suggestion

Team Members:

- Shree
- Eric
- Bryan
- Kun-Lin

Socialization - Social Suggestion

Our goal/approach

- For this project, we wanted to tie together crowdsourcing and AI into a tool that directly brings people together
- Parameters: Location and Interests
- The goal of AI in the project was to streamline the process of grouping individuals by the parameters
- Also additional goal of AI to monitor user interactions within the tool and further customize the experience for the user in future recommendations

What we did

- We narrowed down the focus of the tool to revolve around chat rooms based off of location (proximity) and interests
- The AI component largely involves the live queuing/matchmaking system to create recommended chat rooms
- We also designed features in each chat room that would prompt user contribution and response, which also ties into an AI component

Motivation for project

- We wanted to provide a different alternative to current tools/apps that allow for meetups, have an unique approach
- The idea of a live matchmaking system (which appears often in games) was interesting and we wanted to see if we can apply it to a crowdsourcing problem

Profile

Socialization - Social Suggestion

Why did you choose this approach? (Shree)

- Anonymous -> easier to get started with new people
- Not proactive when placed into a location with date/time

What are issues we ran into? (Kun-Lin)

- Anonymity initially caused some issues because people are less inclined to meet up and chat if they have no idea about the people they are talking to

When you see people online who like the same stuff as you, but you don't know how to initiate a friendship

Socialization - Social Suggestion

(7) What failed? Why?

- Original iteration failed. No messaging chat. Directly put them into group.
 - Failed b/c people are less likely to want to meet up if they do not know anything about the people they are meeting with

(8) Future Directions

- Dealing with malicious users
 - Karma System
 - User can be reviewed after meetings
 - Written reviews combined with star rating
 - Community guidelines
 - Establish what is accepted and consequences
 - Can allow for user input to evolve over time
 - Incorporate AI
 - Moderate chat interactions
 - Utilize computer vision to ensure posted user photos match their true identity

Questions?
