Jobbyo AI

- Find an academic article that addresses military spouses job recruitment
 - Recognizing potential, articulating value, overcoming misconceptions, relocations/unpredictable schedules/family demands, lack of childcare / reliable transportation / long commutes
 - Google scholar, ieee
- Dive deeply into one of the tools listed above that could be used to address one of the problems.

09/16/2025

Things to think about for next week:

1. Roles
2. Connection to other teams
3. Crowds - groups of more than 2-3
 - a. What crowds are you building: spouses, mentors/recruiters attached to them
 - b. What defines the crowds: support group, networking / referral / educational
4. Research:
 - a. What existing tools might be able to do this? How can you use them?
 - b. How can it be a gateway to other social platforms?
 - c. How can the tool help create a profile to make it less daunting?
5. User personas: female, male, younger, older, caretakers
6. Tech to explore
 - a. How to use AI
 - b. Notes about meeting with a mentor, summary
 - c. Matching mentors and mentees
 - d. Recommendation systems

09/23/2025

1. Create a "happy path"
 - a. Connect all of the ideas we have
 - b. Focus on AI

- Clustering, PACE
- Job Coach persona, consider
- IDMe, USAJOBS, OpenStreetMap

9/30/2025

1. Create example user inputs
2. See if you can put them in the llm and produce the desired output

Demo rough script

MC Beginning Speech

Good afternoon, welcome to the IP Crowd Fall 2025 Demo. My name is Jeslyn Guo, and I will be your MC for this presentation. I want to take a second to thank Carl, Moon, and Brett for their guidance and support throughout this semester.

Before we begin, I want to define a PNAMBC demo for those who don't know. PNAMBC is an acronym for "pay no attention to the man behind the curtain". For our demo, this means that it is not intended to be a finished prototype, so drag attention to its potential imperfections. It is a proposed solution with core functionalities but not yet ready for deployment.

A quick overview of our VIP's focus - intelligence platform for crowdsourcing. Crowdsourcing is the act of obtaining information or input from a large group via the Internet. Our VIP intends to build an intelligence platform that bolsters the use of this crowdsourcing to solve a problem. Some examples of crowdsourcing we've engaged in include research, use of large datasets, and user testing. And as you'll come to see much of our implementation involves the use of artificial intelligence, hence the intelligence platform.

This project addresses the problem of military spouses and their job search and career identity. This is often due to relocation. They also may suffer from a lack of confidence, job identity, and proper resources as a result of the relocation. Our research group finds this group particularly vulnerable and underlooked.

Our team focused on three main implementations to address the issues in varying ways. The first focuses on ...

1. A service that pairs spouses with local mentors, provides resources like homework, and generates AI meeting notes
2. A service built off similar ideals to the first, but focused on an AI mentorship
3. A service that intakes user data including resume and other specifications, generates a profile, and produces local job recommendations

9/30- VIP Notes

Running all steps: (PACE)

Interactive app → Ollama → launch →
connect to Jupyter → new → python3 →
pace write up for getting started

LLM:

<u>Input</u>	<u>Output (desired)</u>	select NVIDIA
User persona - background, location, needs ↓	Job Suggestions Nearby - factory user persona & 'partners that are hiring spouses particularly	↓

Common examples

- remote, many locations,
locations near federal
bases, near or providing
daycare, hiring w/o prev
skills required or training
provided, location.

*We're focusing less on Job Coach b/c
other groups covering.
