

VIP Notebook

Jan 7th 2025

- Introduction to VIP
- Overview of last semester's project

- Mapped out plans for an AI-matchmaking application for study buddies

• Past Teams

- Create connections
- Facilitate interactions - past team
- Sharing Resources

Goals

- get a VIP notebook
- think about what team to join this time

☒ 1/8/2025

☒ 1/13/2025

Jan 13th

- Joining a new team this semester
 - I chase sharing resources
- Complete team project plan

Managing resources

- What are our resources?
 - past class notes / past exams / course materials / Q & As
- How should they be grouped?
 - approved by course staff???
 - sorted by upvotes / downvotes
 - reward based ranking system ~~for~~
- How does this facilitate other functionalities of the app?
 - Other functionalities
 - sorting users into study groups
 - facilitating interactions

To Do

- ☐ Confirm team
- ☐ Work on Team Plan

Jan 21st

not able to attend

what I got from others:

- created github repo for class

Jan 28th

- worked on creating prototype sheet for group.

"Moving from concept to prototype"

Most notable contributions

- * thought of a reward based system that can be given through input, upvotes, admins, etc.

- * other user functionalities:

uploading

tagging

searching

- prototype through figma

TO-DO

☒ finish prototype sheet

☒ start working on UI

Feb 4th

- Developed basic application to tag users and make posts

* more features

- uploading documents

- sort questions by tags

- gathered lists of sample questions & responses...

* guest speaker in class *

TO-DO

☒ finish building UI for managing resources

☒ prepare presentation for next week demo

Team Roles: (as of Feb 4th)

Annarose:

- Work on interactive UI (format to mesh with course organization)

Elizabeth:

- Find resources for classes
- Assist with Figma prototype

Teresa:

- Develop prototype on Figma
- Prompt engineering for AI to analyze documents

Erik

- Collecting data from existing platforms with similar features (open resources similar to piazza, edstem, etc.)
- Use LLM to assess quality of responses (usefulness)
-

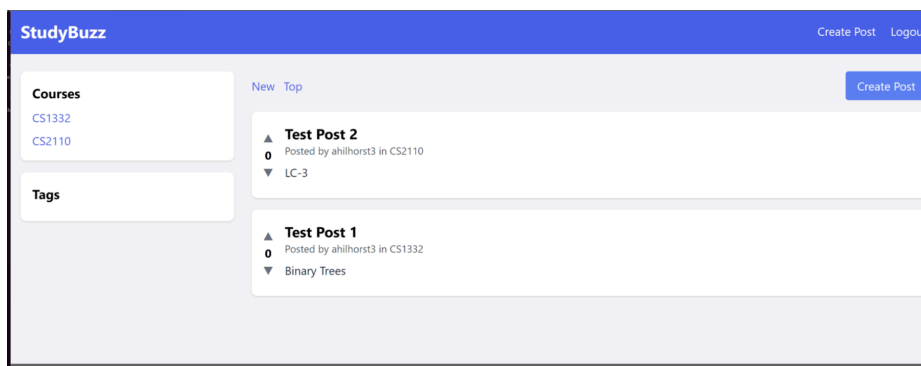

Abhiram

- Work on the resource credibility aspect
 - Use AI to check if the resource is credible based on syllabus, class material, etc. (any material that is uploaded)
- Use AI to recommend previous posts/class content/previously uploaded resources to people with questions

February 11, 2025 (demo)

- Continued working on generating LLM assessments for forum questions.
- Finalized the demo presentation slides.
- Prototype testing plan further developed, with specific attention to tagging and resource quality.

Demo UI:

February 18, 2025

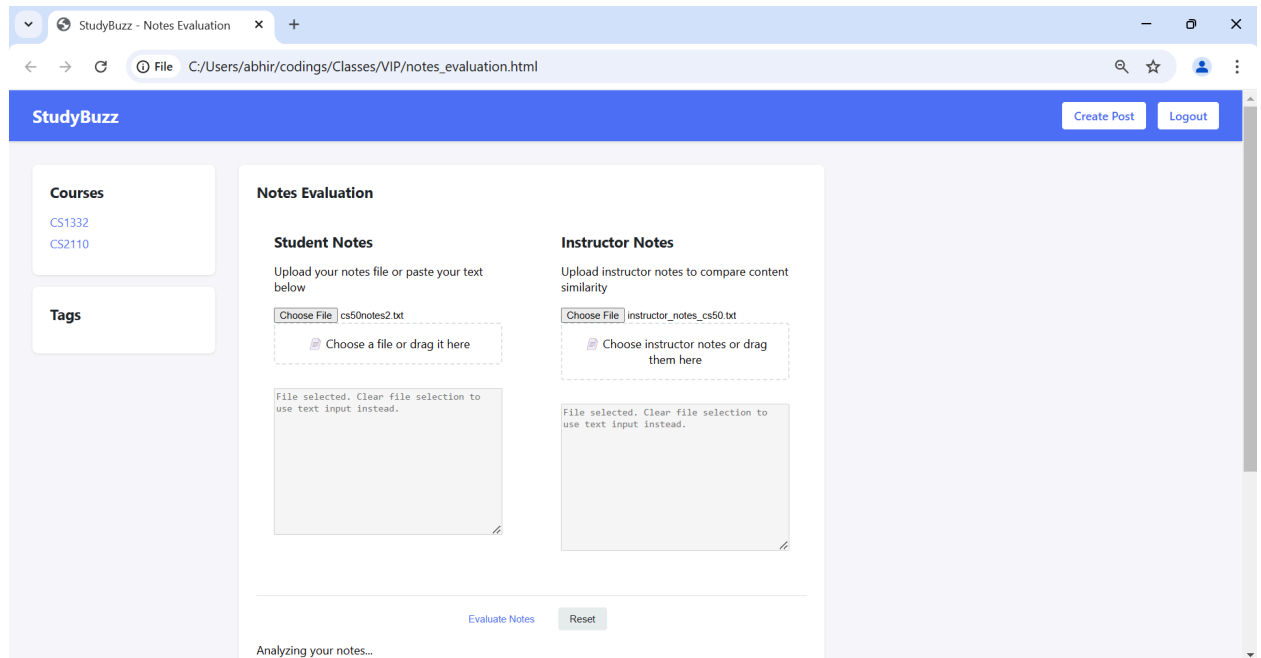

- Reviewed and edited project plans based on feedback.
- Planned to test tagging and LLM analysis.
- Considered using platforms like grok and agenta.ai for testing.
- Worked on the notes evaluation framework, establishing clarity and detail benchmarks.
- **Changes to prototype test plan:**
 - Accuracy testing of AI tagging
 - We will have our group members tag the posts and then compare how the ai tags it
 - We will provide the AI with the course syllabus, and from the topic list it should be able to match which topic the post/resource covers
 - AI analysis: >80% accuracy
 - Users give feedback as to whether or not the tagged content is relevant to the main post
 - Sample size
 - 3-4 test posts per course
 - 1 pdf
 - 1 free text
 - 1 link or video upload

February 25, 2025

- Missed class
- Teammates notes:
 - Today we basically just discussed what we're gonna do with our test plans. The professors suggested that for the LLM evaluation, we can search up methods for scoring student responses and then prompt the LLM to use that method for scoring against a ground truth source. For the ground truth data, we can use resources of a topic we are familiar with. I'm thinking we can also use some high rated responses for questions in an area we know from public forums like StackExchange

March 4, 2025 (demo)

- Finalized testing mechanisms, including a detailed rubric for LLM evaluations.
- Created slides for class presentations on testing and rubric implementation.
- Worked on presentation slides and rubric explanations.
 - **My UI for notes comparisons:**

March 11, 2025

- Implemented rubric-based testing.
- Planned incorporating tagging and rubric testing into a working MVP.
- Suggested an architectural diagram for current and future application development.

March 25, 2025

- Continued work on LLM quality assessment; manual prompt entry approach agreed due to API limitations.
- Explored Figma for visualizing current and future developments.
- Addressed feedback on scalability and rubric applicability, adjusting evaluation metrics per document length.

April 1, 2025

- Focused on finalizing project elements and preparing presentations.
- Designed and finalized feedback mechanism slides.
- Refined final presentation slides and addressed rubric scalability feedback:

StudyBuzz LLM Topic Tagging!

Paste your text document below, and the system will tag it with relevant topics from the course syllabus.

1332 notes from today's lecture:

1. Arrays
Fixed size, contiguous memory
Example: [1, 2, 3, 4, 5]
Access time: $O(1)$

Tag Document

Detected Topics:

Note-Taking Feedback

Your Score

5

What You Did Well:

Excellent! Your notes are thorough and well-organized.

How You Can Improve:

Keep up the great work! There's nothing to improve.

Enter a score (1-5):
5Get Feedback

Note-Taking Feedback

Your Score

3

What You Did Well:

You have a decent structure in your notes!

How You Can Improve:

You could add more detailed explanations and examples.

Enter a score (1-5):
3Get Feedback

April 8, 2025

- Continued preparations for presentations.
- Erik focused on feedback mechanism functionality and future directions.
- Elizabeth practiced for the final showcase, emphasizing rubric objectivity.
 - TO-DO:
 - Prepare for Demo

April 15, 2025 (final demo)

- Conducted class presentations, demonstrating feedback mechanisms, rubric evaluations, and project outcomes.

April 22, 2025

- Worked on final reflections and consolidating project documentation.
- Prepared peer evaluations and final submissions for project materials.
 - TO-DO:
 - VIP peer evals
 - Turn in notebooks
